

## Application Bulletin

### Power Generation

### Hydropower – Pelton Turbine Buckets

**Pelton water turbines are well known for their bucket design that very effectively extracts energy from the flowing water. However, turbine efficiency can be reduced as a result of exposure of the buckets to erosive media, such as sands, silts and gravels. The buckets are also subject to fluid erosion and cavitation.**

#### The Oerlikon Metco Solution

Protect Pelton buckets from erosion and cavitation with Oerlikon Metco HVOF materials and application equipment.

- Extend Pelton bucket service life
- Ensure high turbine efficiency
- Maintain expected turbine power output

#### Recommended Oerlikon Metco Products

Amdry 5843	High performance coating material with very good cavitation resistance
WOKA 3652	High performance coating material for erosion and cavitation resistance
WOKA 3652-FC	High performance coating material, especially for extra-fine silt conditions
HVOF Systems	HVOF gas and liquid fuel thermal spray application systems
